Predictive Modelling Bootcamp Project

Project:
You guys have to train a Machine Learning/Deep Learning model on the Heart Failure Prediction dataset, try to get some good results. Then you have to make the Flask app for the same that we did in the Bootcamp Day 5, i.e you have to make the app.py and index.html

NOTE: You must add your own CSS in the index.html file

Project Submission Format:
- You have to train a ML/DL model on the given dataset, try to achieve accuracy over 80%
- If possible then submit the flask app of the project.
- Having some issues with uploading files? You can also share the Github
- Repository of your project and a screenshot of your working project on localhost.

The Github Repository must contain:
- .ipynb file (in which you have trained your model)
- app.py file (in which you have your flask code)
- .pkl file (in which you have saved your model)

Templates Folder (in which you must have your index.html file)

Project Deadline:
You guys must submit the project before 22nd July, 2025 11:59pm. Any late submissions will not be considered.
